

Supabase capacity: Free vs Pro

Database is hosted Postgres on Supabase. Videos stay on Google Drive. Team photos (up to 5 MB each) are stored in the database. Auth is this app, not Supabase Auth.

Recommendation: pay for Pro (~\$25/month).

Free is 500 MB of database. 80–100 teams at a max 5 MB photo each is 400–500 MB of photos alone — packets, rosters, and indexes do not fit. Free also pauses after 1 week idle and has no backups.

Numbers you provided

Input	Value	Input	Value
Teams	80–100	Competitions / year	20–25
Captains / team	3	Applications	Every team → every comp
Comp admins / comp	2–3	Judges / competition	5–6
Roster size	36 (maxed)	Team photo	Everyone, max 5 MB
Data kept	2 years	Videos	Google Drive (not in DB)

Storage math (2 seasons kept in the database)

What	How it was counted	Low (80 teams / 20 comps / 5 judges)	High (100 / 25 / 6)
Team photos	teams × 5 MB (one photo per team, not per year)	400 MB	500 MB
Rosters	36 dancers × teams ≈ 0.3 KB each	~1 MB	~1 MB
Applications	teams × comps × 2 years	3,200 apps · ~2 MB	5,000 apps · ~3 MB
Judge packets + scores	comps × judges × teams × 2 years	16,000 slots · ~16 MB	30,000 slots · ~30 MB
Users / memberships / indexes	3 captains/team + admins + judges; Postgres overhead	~15–25 MB	~20–30 MB
Total database	Photos dominate. Rows are small.	~430–450 MB	~550–580 MB

Free plan vs this load

Free plan quota	Limit	This app
Database size	500 MB	Over or no headroom (photos 400–500 MB)
Compute / RAM	Shared CPU · 500 MB RAM	Serving 5 MB photos from Postgres is tight
Egress	5 GB + 5 GB cached / month	Each photo view can pull up to 5 MB from the DB
File storage	1 GB (not used)	Photos are in Postgres, not Supabase Storage
Auth MAUs	50,000 (Supabase Auth)	N/A — login is Auth.js in the app
Active projects	2	Fine
Inactivity	Pauses after 1 week idle	Bad for production / off-season weeks
Automatic backups	None	2-year history ≠ backups. Pro keeps 7-day backups only
Support	Community	Pro adds email support

Advice

Choose Pro. It includes 8 GB disk (this load uses well under 1 GB) and does not pause. Keeping 2 seasons in the app only adds ~20–40 MB of packet rows; photos do not double. Supabase Pro backups are 7 days — for a 2-year disaster copy, also keep occasional database dumps elsewhere. If photos averaged 1 MB instead of 5 MB, disk might fit Free, but pause / RAM / no backups still make Free a poor production plan. Sources: supabase.com/pricing (Free 500 MB DB, 5 GB egress, 1-week pause, 2 projects).
